PROFESSIONAL SUMMARY

Frontend-focused Full-Stack Developer with experience building responsive web applications using JavaScript/TypeScript, React, Next.js, and Vue/Nuxt.js. Experienced in creating reusable, component-based interfaces, managing relational databases, and implementing unit tests. Proficient in Node.js, Express, PostgreSQL, Prisma, Git, and Agile methodologies, applied across web projects and collaborative development environments.

PROFESSIONAL EXPERIENCE

BICITAS HISTÓRICAS – INTERACTIVE MAP WEB APPLICATION

MARCH 2026 - JUNE 2026

- Independently developed a web application for a real client using React, JavaScript, Vite, and Tailwind CSS, focused on exploring tourist attractions through an interactive map.
- Implemented user geolocation, dynamic markers, visual categorization, and route calculation with estimated travel times using Mapbox, integrating data stored in Supabase/PostgreSQL.
- Developed an administrative dashboard with authentication and role-based authorization using Supabase, including protected routes to restrict access to administrative functionality.
- Managed the development process using Git and Jira, deployed the application to Vercel with a custom domain, and delivered an administrator user manual.

GENCODE TECH – FRONTEND DEVELOPER

JANUARY 2026 - MAY 2026

PROFESSIONAL RESIDENCY

- Contributed to the redesign and development of the company's corporate website using Nuxt 3 and JavaScript, implementing both designs provided by the team and independently proposed UI improvements.
- Developed responsive interfaces and reusable components following a mobile-first approach, maintaining visual consistency across different devices.
- Implemented dynamic service pages using slug-based routing, allowing reusable structures and content across different services.
- Integrated Sanity as a headless CMS for dynamic blog content management.
- Worked with an issue-based development workflow using Git branches, implementing assigned features and incorporating modifications and feedback throughout the development process.

“PASITOS” VIDEO GAME – UNITY / C# DEVELOPER

JUNE 2025 - APRIL 2026

SOCIAL SERVICE

- Contributed to the development and design of “Pasitos,” a motor rehabilitation video game for the Virtual Reality Therapy area at CRIT Morelia, working collaboratively with another developer and based on requirements provided by the institution.
- Developed the player's calibration system in Unity and C#, using Orbbec Astra cameras to adapt the game experience to the child's position and movements.
- Implemented and adjusted interactions between the player and game elements, including collision detection and behavior for gameplay mechanics.
- Participated in integrating session-generated data with the existing database, adding the necessary data structures to store information related to the video game.
- Contributed to the selection and adaptation of visual assets and adjustments to the gameplay experience based on project requirements.

PROJECTS

FLIGHT SEARCH ENGINE

DECEMBER 2025

TECHNICAL CHALLENGE

- Developed a full-stack flight search application using React, Node.js, and Express, integrating the Amadeus Flight Offers API to search flights by origin, destination, and departure date.
- Implemented a layered backend architecture using routes, controllers, and services, separating business logic from communication with the external API.
- Implemented input validation and data transformation, normalizing Amadeus responses into a standardized format for the frontend.
- Developed unit tests with Jest to validate data transformation, business rules, and controllers using mocked services.
- Implemented frontend filters for price, airline, departure time, and number of stops, along with fallback mock data for API failures.

CHEFPICK – INTELLIGENT RECIPE PLATFORM

FEBRUARY 2025 - JULY 2025

ACADEMIC PROJECT

- Contributed to the development of a web platform for discovering and sharing recipes based on available ingredients, focused on simplifying recipe discovery and user interaction.
- Primarily developed the frontend using React, Next.js, and Tailwind CSS, implementing a responsive interface and reusable components.
- Deployed the application using Vercel.

PHYSICAL THREAT DETECTION USING COMPUTER VISION

MAY 2025

UNDERGRADUATE TECHNOLOGICAL RESEARCH PROJECT

- Developed, as part of a team, a research project focused on detecting physical threats using computer vision and YOLOv5 for object detection and classification.

ACHIEVEMENTS & RECOGNITION

RECOGNITION FOR “PASITOS” VIDEO GAME DEVELOPMENT – CRIT MORELIA

MAY 2026

- Recognition awarded by CRIT Morelia for participation in the development and design of the “Pasitos” video game for the Virtual Reality Therapy area.

3RD PLACE – 7TH UNDERGRADUATE TECHNOLOGICAL RESEARCH PROJECT FAIR

MAY 2025

- Instituto Tecnológico de Morelia
- 3rd place in the Research Report category for the Physical Threat Detection Using Computer Vision project based on YOLOv5.

5TH PLACE – CODING CUP MICHOCÁN 2023

JUN 2023

- Participated in a state-level competitive programming competition, solving algorithmic problems in C++ as part of a team that achieved 5th place.

EDUCATION

Instituto Tecnológico de Morelia | Computer Systems Engineering 2021-2026 | Graduation pending

English B1

TECHNICAL SKILLS

- Frontend: JavaScript · React · Next.js · Vue.js · Nuxt.js · HTML · CSS · Tailwind CSS · Vite
- Backend & APIs: Node.js · PostgreSQL · SQL · Prisma · Supabase
- Testing & Tools: Git · GitHub · Jira · Vercel · Sanity
- Other: C# · Unity · Python · Java
